

Soya Bean

DESCRIPTION:

The soya bean, or “hilum”:

Has a yellow peel. It is used, among other products, for the soymilk and has a high level of proteins (between 40% and 44%).
The moisture level reaches 12%.

Grains with high level of protein:

In addition to the «classical» grains, we propose numerous varieties of soya with a level of protein from 45.5 to 48.5%. They are ideal for the fabrication, among others, of Tofu.
The level of moisture remains at 12%.

Physicochemical characteristics

Test weight lbs./bu limit	54 min per pound
Protein	45 % min
Oil content	18, 5 % basis
Moisture	14 % max
Foreign matter	2, 0 % max
Splits	20, 0 % max
Soybean other color	2, 0 % max
Heat damage kernels	0, 5 % max
Damaged kernels	3, 0 % max
Radiation	Normal
Packing	Bulk or bags
Origin	Argentina
